

LIPOTONIX PLUS

PATENT FORMULA

MIC or The popular name: Lipotropics – (simply means Fat Burning) are a combination of B-Complex and essential and non-essential amino acids. Some of which are not produced by the body or not easily obtained from current food sources. MIC or Lipotropic shots/injections are used in conjunction with many different diet plans to aid in losing weight or weight-loss programs.

Ingredients in our product, Lipotonix Plus:

Methionine (the M in MIC): it assists in the breakdown of fats and thereby prevents the build-up of fat in the arteries, as well as assisting with the digestive system and removing heavy metals from the body since it can be converted to cytosine, which is a precursor to glutathione, which is of prime importance in detoxifying the liver.

Inositol (the I in MIC): helps to maintain proper electrical energy and nutrient transfer across the cell membrane. It also acts as a lipotropic which converts fats into other useful products. Inositol helps establish healthy cell membranes, which facilitate nerve impulses.

Choline (the C in MIC) - Choline assists in controlling your weight as well as cholesterol levels, keeping cell membranes healthy and in preventing gallstones. It is also most useful in the maintenance of the nervous system, assisting memory and learning, and may help to fight infections, including hepatitis and AIDS. Choline is critical for normal membrane structure and function.

Choline is the major precursor of betaine, and it is used by the kidneys to maintain water balance and by the liver as a source of methyl-groups for methionine formation. It is also used to produce the important neurotransmitter acetylcholine.

It assists in nerve impulse transmission, gallbladder regulation, liver functions and lecithin production.

Thiamine - B1 serves as a catalyst in carbohydrate metabolism.

B2 - helps metabolize fats, carbs, and respiratory proteins.

B3 - helps release energy from nutrients. It can reduce cholesterol and prevent and treat arteriosclerosis, among other benefits.

Pyroxidine - or B6 - Pyroxidine is a vital part of the enzyme system and very important to the metabolism of proteins, fats and carbohydrates. It is also vital to the normal function of the nervous and immune systems. The essential amino acid tryptophan also depends on pyroxidine for its utilization. Adequate amounts of riboflavin and niacin are required in the diet for pyroxidine to be used nutritionally.

B-12(Hydrox) is a vitamin which is important for the normal functioning of the brain and nervous system, and for the formation of blood. It is normally involved in the metabolism of every cell of the body, especially affecting DNA synthesis and regulation, but also fatty acid synthesis and energy production.

L-Carnitine - boosts energy by stimulating the body's burning of tryglycerides as fuel, and sparing the supply of glycogen stored in the liver for heavier exertion.

During exercise, the body will burn fat at a rate of 75-80% of maximum exertion, thus less glycogen from carbohydrates is burned. L-carnitine allows the body to burn more fat, save more glycogen, and ultimately boost stamina and endurance.

Chromium – is a metallic element that humans require in very small amounts. It is an essential part of metabolic processes that regulate blood sugar, and helps insulin transport glucose into cells, where it can be used for energy. Chromium also appears to be involved in the metabolism of carbohydrate, fat, and protein.

Dosing Protocol Of Lipotonix Plus

1. **Dosed 2ml. q-week – once a week – with a min. of 5 days between injections.**
2. **Deep IM injection – using a 25 gauge 1.5 in. needle/syringe. In the hip.**
3. **Product is relatively safe. Use caution with patients taking Sulfa or Sulfur based medications.**
4. **Any over-weight person is a candidate for the injections regardless of health conditions. If a patient can tolerate a multi-vitamin...they can tolerate Lipotonix Plus. The ingredients are so SAFE...many of the same vitamins and amino-acids are used in the baby formula Similac Advanced.**
5. **Product is SAFE to be used in conjunction with popular appetite suppressants.**
6. **Refrigerate after first use.**
